

PASSENGER CAR ENGINE OIL

National Synthetic Blend[®] Motor Oil

National Synthetic Blend® Motor Oil

Taking Care of Your Engine

National Synthetic Blend Motor Oils are top performers in engine protection, ensuring smooth operation according to manufacturers' specifications and prolonged engine life. Combining the most advanced additive packages and viscosity modifiers, and blended with synthetic base stocks, National Synthetic Blend Motor Oils deliver performance that exceeds even the most stringent OEM requirements.

Designed and tested for use under the most severe operating conditions, these oils provide:

- Industry leading engine cleanliness
- Outstanding wear protection
- Enhanced oxidation protection
- Reduced environmental impact

Licensed as API SN-Resource Conserving, National Synthetic Blend Motor Oils meet or exceed the requirements set by the following manufacturers: General Motors, Ford, Chrysler, Toyota, Honda, Nissan, Hyundai, Kia, Mitsubishi and Mazda. In the most demanding applications, including extreme weather conditions and engine equipment with turbochargers, rely on National Synthetic Blend Motor Oils for outstanding engine protection.

Blended Base Stocks

National Synthetic Blend Motor Oils are manufactured using some of the finest base stocks available. Hydro-treated conventional base stocks, known for their resistance to oxidative and thermal breakdown, form the core of this formulation. To enhance the performance of this engine oil, synthetic base stocks are added to the base formulation to provide an added measure of engine protection.

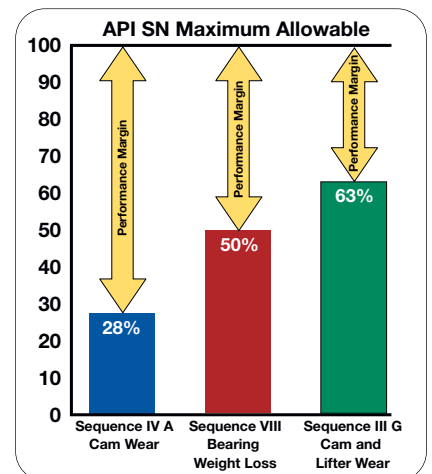

Unique Tri-nuclear Molybdenum Chemistry

National Synthetic Blend Motor Oils feature a unique tri-moly compound. This molybdenum-based chemistry contributes to engine performance and durability by reducing friction and increasing the oxidative stability of the oil. Sliding friction and its associated wear, as well as oil thickening due to oxidation, are reduced.

Extended Drain and Extreme Weather Protection

National Synthetic Blend Motor Oils provide a level of engine protection between the basic performance of National Premium® Motor Oils and National Full Synthetic® Motor Oils GF-5/SN-RC. Synthetic base stocks enable continued high performance even with extended oil drain intervals, or in hot and cold weather extremes. Improved low temperature pumpability decreases wear at start-up. And, at high ambient temperatures, oil evaporation and consumption are reduced due to the oil's lower volatility.

Across a series of stringent industry tests, National Synthetic Blend Motor Oils demonstrate outstanding performance margins that exceed requirements by far.

Specifications National Synthetic Blend® Motor Oils meet these performance requirements by viscosity grade:

- API Resource Conserving
- API SN and SM
- ILSAC GF-5 and GF-4
- DaimlerChrysler MC6395S
- GM 6094M
- Ford WSS-M2C945-A
- Ford WSS-M2C946-A
